

Empowering Youth through Electrician Skills Training

In many rural communities, lack of technical skills limits young people's chances of finding decent employment. Electricity-related problems in homes and small businesses often remain unsolved due to the absence of trained technicians. To address this gap, our organization introduced an Electrician Training Program aimed at equipping youth with practical skills, confidence and sustainable livelihood opportunities.

Before joining the training, most participants had very limited knowledge about electrical systems. Many were unemployed, financially dependent on their families and unsure about their future. The training provided them with hands-on experience in wiring, circuit installation, safety measures, repairing household electrical appliances, reading diagrams and understanding basic electrical principles. Trainees practiced real-life troubleshooting and learned how to maintain safety while working with electricity one of the most essential components of the course.

In addition to technical skills, the program included sessions on communication, customer service and small business management, enabling participants to start their own electrical repair services or seek employment in local markets. Trainers encouraged them to build confidence, work professionally and serve their communities with dedication.

After completing the program, many participants have successfully started working as electricians in their villages and nearby towns. Some have opened small electrical shops, while others have received work opportunities in construction sites, hardware stores and maintenance companies. Their incomes have increased, families feel proud, and communities appreciate having trained electricians available locally.

The Electrician Training Program has shown that skill development transforms lives. It empowers youth, strengthens local services and builds safer communities. With continued support from donors and partners, more young people can gain valuable skills and create a brighter, self-reliant future.
